

JTI IMS POLICY

GSC Leaf Brazil operations, including support and vertically integrated functions, conduct their activities responsibly, meeting the needs and expectations of stakeholders, legal requirements, and other applicable requirements. Aligned with Our Way and the purpose of creating moments of satisfaction and building a better future, they advance Vision #1 through a synchronized, safe supply chain centered on integrated growers, employees, communities, and consumers. This commitment is strengthened by the Integrated Management System (IMS), whose continuous improvement supports Leaf's business model through the management of objectives, risks, and opportunities related to Quality, Environment, Health and Safety, and Energy, for which the company maintains the following commitments:

QUALITY

Drive continuous improvement in the quality of products, processes, and services, placing integrated growers, suppliers, customers, and consumers at the center of our actions through operational excellence, innovation, and sound management practices, ensuring sustainable results for the business and the entire value chain.

ENVIRONMENT

Make responsible choices for people and the planet, protecting the environment through pollution prevention, responsible use of natural resources, sustainable agricultural practices, and management of environmental impacts. Promote continuous improvement in environmental performance and climate change mitigation, contributing to reductions in greenhouse gas emissions by 2030 and carbon neutrality by 2050.

HEALTH AND SAFETY

Strengthen the Health and Safety culture by promoting a safe and healthy work environment and working to prevent workplace accidents and incidents. To this end, identify and eliminate hazards, reduce occupational risks, ensure compliance with legal and other applicable requirements, and ensure consultation with and participation of employees and their representatives on health and safety matters.

ENERGY

Shape tomorrow today by promoting responsible energy use and efficient management of energy resources in compliance with applicable legal requirements. Provide resources and information that support informed decisions when purchasing energy-efficient products and services, and encourage initiatives and projects that help improve the business's energy performance.
